# Designed in New Zealand since 1935

Greens originally began in 1935 in Hamilton, turning its hand to tapware in the late 1970s. Today, Greens Global Limited is a privately owned New Zealand company, with its head office based in Hamilton, New Zealand.

In the last decade we have moved from traditional manufacturing to a strong emphasis on Design, Engineering and Development of our products. Greens tapware is designed in New Zealand and produced using carefully chosen material so that we can provide the best quality and service to our customers.

We design and distribute tapware and showers under the Greens Tapware brand to both local and international markets including NZ, Australia, the UK and the USA.

## Beautiful Design

---

Our products are designed for the modern lifestyle - to inspire you to create an incredibly functional and desirable space.

## New Zealand innovation

---

Innovation is a key characteristic Kiwis are renowned for. Through constant research and development, we focus on delivering technologies that deliver both form and function for every situation.

## High quality and performance

---

Our products meet the highest demands in terms of design and quality. Greens is an ISO 9001 certified company. Our products meet international quality standards including the Australian and New Zealand standard mark.

**GREENS**

where life meets water

# New Zealand Innovations

For a shower as perfect as a good night's sleep, try the new RainBoost® shower by Greens for a world of difference in your daily showering experience.

RainBoost® shower technology has been specifically designed and developed for varying water pressure conditions. Engineered to maximise shower flow and coverage out of low pressure water systems down to 20kPa, as well as performing on high water pressure systems.

For unrivalled performance on low pressure or gravity fed systems ensure you combine it with a Greens shower mixer with our QL cartridge technology (look for the GF symbol in this book).

Suitable for all pressures from 20kPa.

---

## QL CARTRIDGE TECHNOLOGY

Residential water pressure is affected by several influences including the type of hot water system you use, the water supply feeding your home and the height of your residence in a multi-level dwelling. Therefore choosing the right tapware and showers for your home can seem daunting.

Greens make it easy. We have a number of ranges specifically designed to work on low pressure or gravity fed systems using our unique Greens QL Cartridge. And even if you don't know what water pressure you have, these Greens ranges will work on high pressure systems as well.

Suitable for installations from 20kPa to 1000kPa.

Key Features:

- Stainless steel reinforced plate for added strength
- Adjustable anti-scald ring, prevents accidental scalding
- Non-return valves to prevent backflow of cold water
- Adjustable flow limiter to conserve water
- Large bore inlets for better flow in low pressure
- Mesh silencer cone for quieter operation
- Brass spindle for improved strength

---

## GREENSTYLE SAFEFLOW PRESSURE EQUALISING VALVE

Greenstyle Safeflow Pressure Equalizing Valve (PEV) is designed to supply both hot and cold water at equal pressure regardless of any pressure variation in the incoming supply. The valve equalises the pressure by automatically adjusting the higher hot or cold water pressure to the level of the lower water pressure.

The pressure range of the hot/cold supply must be between a minimum 20kPa to a maximum 1000kPa.

Suitable for use with equal pressure: Shower Mixers | Bath Mixers | Single Lever Mixers | Bidet Mixers. Will deliver equal pressure supplied to the mixer and maintains temperature of +/- 1°C (regardless of the temperature change).

# At Greens, we understand water.

At Greens, we understand water. We understand about water pressure. We understand that water is a scarce resource. We understand that each market we operate in has specific standards and requirements for the products that deliver water. Most of all we understand that in many ways we are all connected by water.

Most new homes today are built using high or mains water pressure systems. A large number of existing homes and areas around Australia operate a Gravity Fed or Low pressure system.

Look for the "GF" symbol to make it easy for you to identify the right product for your requirements.

Water connects us all. It informs and inspires us and it energizes our relationship with life.

We know that identifying what type of water pressure you have in your home is vital when deciding on tapware and shower products. No matter where you live, what your lifestyle, or your water pressure, Greens products use technology specifically designed for both form and function to inspire you to create an incredibly functional and desirable space.

**Greens - where life meets water**

We take our environmental responsibility seriously. The Water Efficiency Labelling Scheme (WELS) is designed to provide information through labelling at the point of sale, to consumers buying the products that use water. The purpose of the label is to help consumers choose products that use less water but still provide a satisfactory level of quality and performance. All WELS products must be registered with the Australian regulator, rated and labelled according the requirements of the WELS Standard AS/NZS6400:2005 Water efficient products rating and labelling. More information can be found on [www.waterrating.govt.au](http://www.waterrating.govt.au).

All relevant Greens product carry the WaterMark™ certification mark. This confirms the product complies with the Plumbing Code of Australia and the relevant Australian Standards, which relate to product quality, including health and safety, and warrant that it is fit for purpose and has been tested independently. The WaterMark® logo, the relevant product standard and the license number are required to be marked on the product itself.

## TEXTURA

Textura stands out in the crowd bringing true textured finishes to the bathroom. With its unique textured finish, the Textura range adds a distinctive touch of luxury to any home.

All Textura mixers are packaged with both a pin lever and non-pin lever handle.

## SWEPT

Forward and upswept, this elegant, soft square range is slim and striking with stunning clean lines. The effortless simplicity of Swept bathroom collection is the perfect complement to any new bathroom or ensuite. Swept showers feature the new AirFlo™ shower technology which pulls air into the handset and then mixes that air into the water stream, filling the water droplets with tiny bubbles of air to create a wonderful invigorating spray.

618053 | Chrome  
620mm

## PRODUCT CARE & MAINTENANCE

Maintenance of the finish of your tapware is important. Here are a few simple tips to follow:

### All Finishes

Chrome plated surfaces should be cleaned with a soft damp cloth using water with liquid detergent or soap, then wiped dry to avoid water spots.

Do not use cleaning agents containing a corrosive acid or scouring agent, as well as cream cleaners (they are abrasive), as they may damage the surface which can void your warranty.

### Stainless Steel 304

Stainless steel surfaces should be cleaned with a soft damp cloth using water with liquid detergent or soap.

Do not use cleaning agents containing a corrosive acid or scouring agent, as well as cream cleaners (they are abrasive), as they may damage the surface which can void your warranty.

Stainless Steel 304 is suitable for most outdoor installations but not in coastal areas. Stainless steel surfaces should be cleaned weekly with liquid detergent or soap and water, then sprayed with fresh water and then wiped dry. If water spots accumulate on the surface, clean by applying a 50/50 solution of water and white vinegar, spray with fresh water and then wipe dry.
